# LETTER OF TRANSMITTAL

# DEPARTMENT OF THE INTERIOR, OFFICE OF EDUCATION.

Washington, D. C., June, 1931.

Sm: I transmit herewith a manuscript entitled "Bibliography of Research Studies in Education, 1929-1930," and recommend that it be published as a bulletin of the Office of Education. This is the fourth manuscript on this subject which has been prepared by members of our library staff. There are many indications that this bibliography meets a real need on the part of students of education. It is hoped that it will assist in coordinating the efforts of various graduate schools of education as well as those of city and Stato school systems engaged in the experimental study of local school problems.

Respectfully submitted.

WM. JOHN COOPER, Commissioner.

The Secretary of the Interior.

# INTRODUCTORY NOTE

# SCOPE OF RIRLLOGRAPHY

The Office of Education presents herewith the fourth 1 annual com pilation of research studies in education, comprising masters' and doctors' theses and other investigations completed from July, 1929, to September, 1930 A slight change has been found necessary in this volume regarding the period covered All studies completed up to the heginning of the school year 1930-31 have been included. In future issues it is planned to cover the school year rather than the year beginning in July and ending the following June The increase in the number of studies in this bibliography over the number in previous issues is accounted for in part by the longer period covered We have included all studies reported to us for 1930, except in cases where we have bad definite information that the study was com pleted after September 1, 1930 In some instances abstracts of studies completed before September 1, 1930, have appeared in publi eations issued subsequent to that date. Inasmuch as these studies were actually completed during the school year 1929-30, we have included them, even though the publication containing the abstract earries a later date. This is true in the case of the University of Pittsburgh studies, abstracts of which are found in the University of Pittsburgh hulletin for November 1930, and the University of Col orado studies for December, 1930, containing abstracts of the Univer sity of Colorado theses The data contained herein were received in acsponse to letters sent out in May and October, 1930, to all agencies known to this office to be engaged in educational research Universities and colleges, city and State research hureaus, and other research agencies were included In addition, about 25 educational magazines for the period covered were examined and studies selected for listing herein The information received from the various coop erating agencies was sometimes indefinite and incomplete, but all pertinent data reported to us have been incorporated . Annotations for the periodical references as well as for many other studies were made in the library of this office, annotations for masters' and doc tors' theses have in most instances been furnished by the person re porting the investigation

<sup>&</sup>lt;sup>1</sup> Earlier bulletins in this series are 1926-77 Bulletin 1928 No 22 1927-28 Bulletin 1929 No 36 1928-29 Bulletin 1930 No 23

The material assembled herewith has been classified and indexed in the library division of the Office of Education, by Edith A Wright, with the assistance of Ruth A Gray As in the earlier volumes, author and subject index immediately follows the list, which, with the cross references at the end of most of the sections, should make the material on any special phase of education readily accessible. The index of institutions and organizations at the end of the volume shows the various agencies which are cooperating.

# ANALYSIS OF SUBJECT MATTER

Three hundred and sixty eight institutions and organizations are represented . Of 4,651 studies listed, about 55 per cent represent masters' and doctors' theses, over 15 per cent periodical references. and the remaining entries are for studies of city. State, and various independent organizations For purposes of comparison, the 122 subjects included in this bibliography have been combined and reduced in the following table to 25 main topics in order that some rden may be bad of the fields which are receiving the most attention at the present time. The tabulation shows the number of doctors' and masters' theses, the number of city school studies, etc., with the total number of all studies in each subject, and the percentage that the total number in each case is of the grand total. While these percentages indicate to a certain extent the subjects in which there is most interest, they do not show the real situation in every instance For example, the number of studies listed under Elementary Educa tion is very small. However, there are many studies classified else where which deal with education at the elementary level Such sections as rural education, special subjects of the curriculum, school management, and testing, will be found to contain many references to studies at the different levels This fact should be kept in mind when examining the table With due consideration to the over lapping which of necessity occurs in a list of this kind, an examina tion of the percentages reveals the fact that the greatest emphasis during the period covered has been on the special subjects of the curriculum Twenty three per cent of the total number of studies is credited to that topic and this does not include a number of inves tigations in curriculum making which are listed under School Management. Of the various subjects of the curriculum, English leads in interest, with reading and arithmetic following Of special note is the amount of educational research which has been done in the field of training and status of teachers It is second in interest to the topic Special Subjects of the Curriculum, and it also ranks second in the number of doctors' theses completed in the field While the accompanying table has its limitations, it will show not only the special phases of education which are commanding attention to day, but also the subjects which graduate students of education are investigating

# AVAILABILITY OF STUDIES LISTED

Many of the studies listed are available for consultation in various public and institutional libraries. Printed material here mentioned may ordinarily be obtained from the publishers. Unpublished studies, which are, for the most part, masters' and doctors' theses, are indicated by the abbreviation "ms" after the number of pages, signifying that the study is in typewritten or mimeographed form. A star indicates those theses which are on file in the library of the Office of Education. They may be borrowed for a limited time through the interlibrary loan system. For information concerning other theses, address the institution or organization under whose supervision the study was made. The Office of Education can not supply the publications listed, other than those expressly designated as its own.

As comparatively few of the masters' theses have appeared in printed form, it is with difficulty that one learns of the results of these investigations. It is therefore with satisfaction that we note the growing tendency for institutions and organizations to issue ab stracts of theses in education prepared under their supervision Among the publications containing such abstracts may be noted the following The University of Pittsburgh bulletin, November, 1930 the University of Colorado studies, December, 1930. News Letter. Alpha chapter Phi Delta Kappa, Indiana University, April, 1931. listing Indiana University theses in education. University of Illinois bulletin No 55, 1931, Annotated Bibliography of Graduate Theses in Education at the University of Illinois and Bulletin of the Depart ment of Secondary School Principals of the National Education Association, containing abstracts of unpublished masters' theses in the field of secondary school administration of the University of Southern California There has also been published recently an Annotated Index of Theses and Dissertations in Education of the University of Southern California and Abstracts of Studies in Edit cation at Pennsylvania State College Such lists and abstracts will and materially in acquainting research students in education with what has already been done along certain lines and will make avail able a vast amount of data contained in masters' and doctors' theses which up to the present time has been rather inaccessible

#### FOREIGN COUNTRIES

139 Abel, James F National ministries of education Doctors thesis 1939 George Washington university Washington D C Washington United States Government printing office 1930 165 p (U S Office of education Bulletin 1930 no 12)

Discussed the history characteristics nature and functions of the national ministries of clustation and their relation to the tires, treets of elucation Develotices in detail the ministries of England France and Mexico blookings. Pitts five countries have such ministries. Their authority is limited to present education. The relation to be elementary education is complicated and varies much it different countries to ecconducy education it is direct authority and fairly well defined. The relation to higher education varies from the entire freedom of Inglish universities to the entire control exceeded by the ministry over the universities in Spain. A ministry of education in the viscosital to a good national system of education is not viscosital to a good national system of education in the left own can illustrate the properties of programment and cultural status the people of each country must work out for themselves the ndrigability of administering or directing education is mogha a national ministry.

165. Kilander Holger F Science education in the secondary schools of Sweden Doctor's thesis 1939 Techers college Columbia university New York N Y

Science classes in all types of edools in Sweden were visited conferences and the cussions were held with science teachers authors of ections texts and offer electors science education literature including coarses of study etc were studied. Findings Science holds a prominent place in the interests and activities of Swedish people adence training occupies a place of much more importance tism in the secondary schools of another interests occupied a place of texts of the secondary schools of another is studying there estemes simultaneously laboratory works a very limited though demonstration, experiments are namerous. There is notionally of agreement in regard to the relative place of stress on sciences between different school types Stress in Swer grades is on practical content and application. In the blicker product is no that I ortical and mathematical Instruction centers around reacher and class demonstration rather than upon textbook. Trend in we're contraction is toward individual informatory we're master's detree it raising quintened to a master's detree.

universities Teachers licenses are granted an the basis of an examination. Students at the Normal college are of messre scholarschip and expect to be transled in a short time after which they are given life cartificates entitling them to teach any aubject to any grade in any type of school.

• 176 Meier Lois' Natural science education in the German elementary schools Doctor's thesis 1930 Teachers college Columbia university New York N Y New York City Teachers college Columbia university 1930 158 p (Contributions to education no 445)

The study was undertaken as an investigation of natural science aducation in German elementary schools and teachst tribing institutions with possible simplication for hatural science education in similar American institutions. Observations and research for the study were carried on in Germany over a period of 13 months in 127 and 10°8. From a study of educational practices in Germany certain implications with regard to natural science education in the United States are evident. The situation in the United States is less open to analysis than in Germany where natural science and its introductory study Reimerk nade are prescribed subjects of the curriculum which is determined by the Ministry of education of each state

#### CONTRACT PLAN

264. Blaue, William D. The present status and future possibilities of the project method in public school teaching Educational method, 9, 94-104, November: 166-76. December 1929

The purpose of this study was to determine to what criest the project method is being used by public achool teachers the attitude of the teachers and superfusor stung the method toward continuing and extending its use, the subjects of the elementary school most often tample by the method, difficulties and deviorators is list use, and future postibilities of the project method in public school teaching. A total of 121 satisfactory questionnaires were received on which to have conclusions.

- 205 Central City, Nebr. Public schools Using the contract plan in junior and senior high schools 1930 16 p ms (Teachers' bulletin, no 20-2)
- 266 Shepard, E L Contract vs fraditional method in teaching sixth grade history. University of Pittsburgh school of education journal, 5: 47-51, December 1929

The purpose of this investigation was to make a comparative study of the effects of the traditional could, assignment redictation method and of the written "contract" method in aixth grade history in a school system where departmental teaching is not possible. Comparison was limited to a study of average gain in historical knowledge, and average retention of information gained. Conclusion The results achieved in history by sixth grade purples of a nondepartmentalized school appear to be equally as good under the traditional plan of daily oral assignment and rectiation of lessons as under the contract plan with its written assignment and directions for study.

The traching and learning abilities of rats and human beings were studied by the use of various types of univers. Data calculate that for human beings for all methods the efficacy of the fullion varied with the amount and the stace in the learning process at which it was given Lificoxy of tuition tended to decrease with the amount given and the later stage at which it was given

304 Cheng, N. Y. Retrovetive effect and degree of similarity Journal of experimental psychology, 12 441-49, October 1929

The author planned to study the relation of the retroscite effect to the degree of similar ity and to discoure whether the relation differed for anticipatory retail and relearation. For the two experiments performed original and interpolated materials lists of nonsense syllables which exhibited three degrees of similarity with respect to spelling were used. The entry line collects students were used as subjects All interpolated conditions excerted some degree of retroscitive.

365 Cook, Lemuel Thomas Temperament in relation to success in school Master's thesis 1930 University of Colorado Houller University of Colorado studies 18 51 December 1979 (Metract)

An inquiry into the truth of the doctrine that the most effective a heal work is that based wholly upon the child a interests that I y at I cheerfulness are conductive to the best work. Two methods of discriming temperament were used. The teachers accred each child. These ritings were supplemented by those secured from feeling teactions. to the words in two carefully prepared word lists of 60 words each. Data indicate that the children who did not like achord made approximately as good grades as those who riid like schoot

458 Brainard Paul P The mentality of a child compared with that of apes. Pedagogical seminary and Journal of genetic psychology, 37 203-23 June 1930

The subject of this study was a little girl aged two years and seven months at the beginning of the tetts which were adaptations of those given to zero, by W. Kobler Other children were used as a check on revuls, or for preliminary testing. Fladings The same semoitonal attreves are observable in the actions of the aper and children. There is the same general approach to the solution a vigocous striving for the objective in a direct manner and is accord with old habiton.

The purpose of this study was to suc set a new system of units for the measurement of growth. The new system has been found to apply not only to educational measure ments, but to all growth data secured noder certain defined conditions whatever the biologic field. The author believes that when the folses concepts and units which he presents are substantiated and perfected, a new era of precise experimentation and centrel will dawn for all hillodgical scientists.

psychology monographs, 7 1 79 January 1300
A study was made with young children as subjects, in a labocotory situation of certain aspects of suminosal excitement. Measures were taken over a period of time, each find vidual acrow was represented by 11 different measure? The subjects were il children in the Child institute of John Hopkins university. Their ages ranged, at the beginning of the experiences, from three years free mooths to fire years one month.

464. Eliot Abigail Adams. Lating habits in relation to personality development of two and three year old children Doctors thesis 1920 Harvard university Cambridge, Mass. 241 p ms.

Tip; two boys and 7" girls who attended the nursery school of the \ursery training school of Testan and the Cambridge nursery school were rated in 31 personally traits and pated in four prohema of conduct once a month for periods of one to four months.

The rating of the personality traits and judding of the problems were done by three raters. One of the four problems was estimabileties Finiskey extent were studied and compared with nonfinisky extent Data indicate that the guidance of a young child's eating habits is probably not only an important participantsi problem but no important personality problem as well in also should be handred as a vital part of a program of the total personality development for each individual child.

Three hundred white children eurofied in the public achools of Montelair and Englewood N J were given the motor achievement tests. They were classified according to age ave six and seven years. Each age group was equally divided according to sex there being 50 children in each of the six age sex groups. Some of the motor achievements which may be expected of five six and seven year old children have been shown in this study Comparisons giving significant likeness and differences between age sex croups have been pointed out

  Gives the results of measurements given to 243 pupils of grades 8-0 The Stanford
  neitherement test, multimental scale, chronological age and Sims score card were ased
- 530 Clark, Edward L (Portland, Oregon). The predictive value of the psychological examination prepared by the American council on education in the College of engineering scholarite tests (1930)

The general conclusions from the studies are as follows: First, the students making the highest gross scores in the psychological tests are not necessarily students who secure the

combined Alpha and Bets, and to survey the sex differences minors these various groups as reveiled in the individual tests of the two scales, Alpha and Bets. Results of the combined Alpha and Bets showed that with the exception of the Portuguese group, the hops are, on the whole, more variable than the girls but do not equal them in average neefformance.

Personality and intelligence A study of responses, other than intellectual, noted in a simple mental test situation Doctor's thesis, 1930 Teachers college, Columbia university, New York, N Y. New York city, Teachers college, Columbia university, 1931 62 p. (Child development monographs, no 4)

Study was based on records obtained during psychological examination of 91 children, living in a suburban community, examined within three months of their third birthday Behavior responses selected for study were: resistance, persistence, gross amount of spon taneous conversation spontaneous activity, spontaneously repeating or demanding other test material and the spontaneous use of test materials for purposes other than indicated at a given moment Reliability of recording these responses was found to be uniformly

very high. Behavier responses studied show alight relationship to mental test situation with exception of resistance and spontaneous conversation. Sex differences were negligible interrelationships of various factors were for the most part negligible. The study showed that measures of the various traits definitely discriminate among the children and the measure of these traits is reliable.

753 Dowell Pattie An analysis of the reading interest of third grade chil dren Moster's thesis 1930 North Carolina state college of agriculture and engineering Palelgh

Shown the literary ideal rather than the laterant of the student as the dominant aim in the selection of most materials for the approved reading texts for the third grade. Chill rem of widely different social groups show little or no d inference in their interests. Stories much liked by third grade children have a variety of elements in interest. Kindness and bravery were found to be the most popular interest elements.

754 Durrell Donald Dewitt. Reading disability in the intermediate grades Doctors thesis 1930 Harvard university Cambridge Mass 243 p ms

A comparison wan made between the reading age and the Stanford Uniet mental uge of all children in the flarrard growth study who had entered the flart grade at the same time. Fifteen per cent of the 1130 children examined were to be classed as returned readers. Twenty per cent of the hops were retained as compared with 10 per cent of the gith. An outline of the steps necessary to sequire efficient habits of silent reading are given. A test battery was need as a basis for analysis of the reading of 52 children 20 were returned readers und 26 were normal readers who were paired with he retarded readers in respect to age sex race metal large and intelligence quotient. The difference between the two proops was greater in arial reading than in silent read.

Conclusional it is possible to outline remedial measures for the different innde

quarder found by the use of diagnostic tests of reading. Further research should provide tests of intelligence less influenced by reading a better understanding of the causes of reading disability, a unified bettery of tests for reading diagnosts, and remedial and preventive measures for use in the classroom

## SPELLING

\$75. Abernetby, Ethel M. Photographic records of eje-movements in studying spelling Journal of educational psychology, 20: 695-701, December 1029

Eight pupils in grade 6 of the University of Chicago elementary achool, and four graduate students of the University were the subjects of a study in Investigate the relation between the method of learning to spell, as indicated by photographic records of eye-morroneuts, and efficiency in learning Findings. Adults have a brooder recognition span, are decidedly briefer in the duration of fixations and make force regressive movements.

S76 Archer, Clifford P. · Saving time in spelling instruction, Journal of educational research, 20: 122-31, September 1929

In order to throw some light on the problem of what effect the study of one word has upon another in all types of conditions and completailies, the writer planned and concucted a series of three experiments. In this article the experiments are described, and a few results and conclusions are given

877. — Shall we teach spelling by rule? Elementary English review, 7 61-63, March 1930

Reports an experiment with 150 children in resching one rule in spelling Findings; The method of teaching the rule is important. It assists in learning to spell when properly tought

878 — Transfer of training in spetling Iown City. The University, 1930. G3 p (University of Iowa studies, first ser., no 180, June 1, 1930 Studies in education, vol 5, no. 5)

Bibliography, p 61-62

In this investigation three different types of words were selected which differ with respect to the method of adding the suffix "ing". The data presented furnish quite conclusive evidence of positive transfer of about equal monunts between the base forms of words the s forms the ed forms and the fag forms No significant differences between the transfer of ability of boys and sitis were found

Six bundred and airy five spelling words of rations degrees of difficulty were given to 75 undergraduate college students. Data secured from the dictation of these words were treated statistically. Tindings. Individuals are likely to maintain at rations levels of difficulty approximately the same relative speed. They tend to keep constant their relative standing in accuracy for the various levels of difficulty. There is a positive correlation between individuals standing in accuracy for all words. At the level of difficulty words there appears to be no correlation between speed and accuracy.

1060 Taylor Mrs Rietta S A free association vocabulary of children in grades 2 and 3 Mastera thesis 1930 University of Oklahoma Norman 85 m ms

The purpose of this study was to determine the words children use in the second and third grades. A free association to exability was accured by having children write all the words they could think of in 100 minutes in a bookiet with spaces under the letters of the slightless. The study consisted of making a count by grades of the number of running words. The 100 words of highest frequency in each grade were selected and compared with Throught ever a selected and compared with Throught ever as many different and numbers words as the scoril grade when the number of children were the same in both grades. The lack of agree much between the writter a list and the Throught. International kindergrater union and the Hora lists is very striking especially in the first 100 and 500 words. We did a chose speciment between the writer's and the Throught list than the Horn list. The data lookings that is the total number of words and the placesteent of words by or wooks for children is readed.

- In this series of articles the author takes up the philosophical and psychological principles that govern the teaching of mathematics and shows how they can be applied to actual teaching practice

- 1155 Poirrier, Mathilde Elizabeth Vocabulary grading of six French books Master's thesis, 1930 George Penbody college for teachers, Nashville, Tenn 77 p ms
- Six French reading texts were ranked on ascending scale of difficulty as follows Lat Poudre sux Yeux, Le Malade Imaginaire Schections from Maupassant, Le Roi des Montannes Simple French from Great Writers, Textarin de Tarascon
- 1156 Rogal, Abraham The frequency of error in representative grammatical constructions in first term high school French Master's thesis, 1930 College of the City of New York, New York, NY J. 115 p. ms
- Frequency of error litts were constructed from those baying fand a previous foreign language and those who have ant Findlags While pupils having had a previous foreign language are senerally superior, the superiority can not be averified to any particular elements.
- 1157 Ruffin, Ruth Carolyn New type tests in elementary French Mas ter's thesis, 1930 George Peabody college for teachers, Nashville, Tenn 148
- p ms
  Two tests were given on each of the first 20 lessons of De Saure a Cours Printique da
  Francais Findings Due to numerous details in the study of a language, varied types of
- tests are necessary to determine the needs of students

  1158 Sammartino, Peter A standardized test in modern languages Jour
- and of educational research, 20 231-33, October 1920

  An explanation of the Sammartino Krause standard French test, published by the Public School Publishing Company, Bloomington III
- 1159 Selbert, Louise C An experiment on the relative efficiency of studying French vocabulary in associated pairs versus studying French vocabulary in
- content. Journal of educational psychology, 21 207-314, April 1980
  An experiment was performed with a group of 60 college students in second year French
  to find the relative value of four different methods as far as vocabulary learning is con
  ceracd. The method of learning rocabulary by associated pairs is superior to the other
  methods tried in the experiment
- 1100 Stoddard, George D An experiment in verbal learning Journal of educational psychology, 20 452-67, September 1929
- Three hundred and twenty-sight popils from 11 different schools none of whom had tailed French were divided into two approximately equal groups. One group was given a list of 50 French English words to learn the other group learning the same words from English to French. Data indicate that wherever translating of French words is the important ronsideration the jearning order absoluble be French to English.

#### ASSTRUCTED

1217 Adams Roy Edgar A study of the comparative value of two methods of improving problem solving ability in arithmetic. Doctor's thesis 1930 Uni versity of Pennsylvania Philadelphia Philadelphia Pa University of Penn sylvania 1930 68 p

An experiment with public school populs of grades 3 and 4 to determine the relative value of two methods of instruction in solving problems in arithmetic with special consideration of the effect of detailed mailysis upon pupils problem solving ability

1218 Bates William Zole The effect of organized drll on improvement in reasoning ability to arithmetic Master's thesis 1999 University of Colorado

Standard tests were given to 171 elementary pupils during the year 19°8-1929 for intelligence and achievement levels followed by objective drills l'indings (1) Different kinds of ability were measured by the different tests (") pupils should gain from 138 to 1485 per cent in the four grades (3) gain in number of exercises solved 130 to 16° 8 per cent for the grades (4) gain doe to drill was approximately one-half school Year

1219 Brownell William A Remedial cases in arithmetic. Peabody jour nal of education 7 100-107 September 1999 147-55 November 1929 208-17 January 1930 290-98 March 1930 362-72 May 1930

The first of this series of articles gives a detailed statement of the purpose of these reports the general procedure employed a description of the tests used and the point of view and theory of teaching and learning which determined the nature of the remedial instruction Each of the other articles presents a case study of a child who was having difficulty in arithmetic Case 1 is by Mary L. Gabbert case 2 by Roy Evans case 3 by Mattie S Trousdaie and case 4 by Willie I' Whitson

1210 Brueckner L J Adiagnostic chart for determining the supervisory needs of teachers of arithmetic. Flementary school journal 30 96 10° O toher 1000

The diagnostic chart included in the article is designed to assist the appertisor of interesting instructional needs to order that the superviver proportion may be lotted gently directed. The intelligent use of such a chart with tend to free the individual supervisor from personal blass and prejudues.

1221 Buckingham B R How much number do children know? Fluca itonal research bulletin (Ohio state university) 8 279-61 Systemier 11 1922

Home reserved abutent (often sugar university) 6 205-61 8 prefiner 11 1922.

Gives the results of a study of 1 355 chillen in grade 1 to find out if the chillen in crued 1 to find out if the chillen in crued 1 to find out if the chillen in crued 1 to find out the could could be study of the teaching of number. Sixty per cent of these fix year-olds knew I alf it e addition combinations when they entered the first grade.

1222 Buswell Guy Thomas Summary of arithmetic investigations (1929)

Elementary school journal 30 786-75 June 1030

The annotated bibliography of investigations of the methols not results of teach n
arithmetic represents the publications for 1020 which are worth s rious study ty as losts

of education. The subjects treated most frequently were flags site and run 'fiel (ed.) ing Problem solvion curri utum construction and supervision of nethods.

1223 Carson T. E. and Wheeler, L. B. Rehabilitation in arithmetic with

college freelmen. Peabody journal of education 8, 24-27, July 1970.
An experiment was conduced at the last frameser attic tenches college to determine the artituation with the second of the fall measurement of 1970.
So has been add airty their retainent took the woody McCalla miled for international artitudes from 1, 2, 3 and 4 tests. Remedial classes were conducted for the 61 students where the word with the second of the fall with the fall second of the fall of the fa

that they had reached the standard 1224 Chapin Mamie Gertrude Grades obtained in arithmetic in grades G and 7 in four types of schools Mesters thesis, 1930 University of Chicago

Chicago III
1225 Chase V E The diagnosis and treatment of some common difficulties
in solving arithmetic problems Journal of educational rewarch 20 3 k.-42

December 1929
A common cause of difficulty in solving verbal problems was found to be insufficient mastery of the for dameotals. Failure with the combinations (ovolving " 8 and 9 were

trequest. Of the fundamental processes division prescried the most difficulty

1226 —— How Fordson children perform with specific types († arithmetic
problems 1929 Fordson public school Dearborn Mich 10 p ms (Bulletin

no 33 ]

Detailed analysis of how children perform with specific types of problems. Much improvement resulted from placing detailed findings in teachers hands

1258 John, Lenore Effect of using the long division form in teaching division by one-digit numbers Elementary school journal, 30 675-92, May 1930

During the school year 1927-1928 two groups of 4fth grade pupils in the University clausing the school year 1927-1928 two groups of 4fth grade pupils in the University of Change were taught division by the short division and long durision methods Conclusions arrived of are only tentative as the number of pupils involved in the study was small. Data indicate that a justifiable method of procedure would be to teach first the long division form applying it to the solution of examples with divisions of any number of digits. When this method has been learned, teach the short division method as a short cut applying it not only to division by one-digit numbers until so to division by two-digit numbers ending in error or three-digit numbers canding in two zeros and to division by such numbers as 12 and 25, the multiples of which are families.

The sim of this study was to ascertain to what extent a group of pupils initiating the seventh grade had complete mastery of the fundamental boards or combinations in srithmetic. Approximately 2.0 pupils finishing the seventh grade in the John Muri high echool of Les Angeles were tested in giving automatic responses to the more difficult hilf of the 400 possible combinations in the flour reoccases.

1335 Smith, Victor C Science methods and superstition School and society, 31 66-68, January 11, 1939

This study was moderance to secure evidence on the value of phoratory work in general science and on the effect of studyling velones on superstition. Two experimental groups were set up to the inicht grade of the high school at Potlatch Idaho. One group was a reading group the other a laboratory acroup. The study shows little positive evidence that might cause any change in instruction superstition decreases as a result of science instruction.

1396 Stemple, Forrest W. Science needs of pupils in small high schools based on an activity analysis. Doctors the 4s, 1930 Cornell university, Ithaca, N X 175 p ms

A study of 100T activities of the people of four different types of communities in West Virginia with reference to the contributing values in acleane Thioding 80 far as activities are concerned biology seems by far the most important acleane subject for the small that behoods. Physics and cheatitry seem about equally important The activities foreive in at least laif the cases more than half the ecleans in combination the especiation of the sciences in teaching there may be located but it is not natural. Chemistry since occurs searcely half as many times as chemistry in connection with blokogy, and specification places of science occur in the activities of rural people simuch fire times as frequently in connection with blokogy and spine activate of the scape activities of rural people simuch.

1481 Stout, Harry O Reflective thinking and its educational bearings in high school chemistry Master's thesis 1930 Ohlo state university, Columbus.

Columbus, Ohio state university, 1930 83 p

Evaluation of traditional versus laboratory plan on the basis of information gained and atimulation of scientific approach to the solution of problems Findings Laboratory type of procedure was equal to traditional method in mastery of facts, it was superior to traditional method in fostering interest and problematic approach to solution of problems.

1482 Turcott, George Status of chemistry teaching in Montana high schools 1930 State university of Montana, Missoula

1483 Van Horne, James Don. An expetimental compution of individual and demonstration methods in high school chemistry. Master's thesis, 1030 University of Southern California, Los Angeles.

1484 Wakeham, Glen High school and college chemistry School and society, 32 206-208 August 9 1930

During the past seven years a study of the grades of freehman chemistry students for the first querter has been made in a school offering a single 12-querter hour course in general chemistry in which no differentiation is made between freehmen who have had high school chemistry and those who have not A previous high school course in chemistry is shown to have little if any, effect upon the success of a cellege chemistry student

1485 Ward, L A. Determining the specific objectives for beginning chem istry Master's thesis, 1930 Western Reserve university, Cleveland, Ohio

A comprehensive list of topics was submitted to about 200 high school pupils and 25 adults requesting that they list questions which these topics suggest. The most frequent questions formed the objectives of the proposed course in chemistry

1436 Woolley, Mary Ida A three-vear interest program in general chem latry Master's thesis, 1030 ,George Penbody college for teachers, Nashville, Tean. 111 p ms

A study of the chemical exhibit chemical literature and the organization and work of a chemistry club [Indings There are interesting facts and insterlals available for enriching the study of almost every principle in chemistry

1487 Wray, R P Utilitarian values of chemistry as measured by fre quency and pleasure in use Master's thesis, 1930 Pennsylvania state college, State College

Testimony was obtained from 178 individuals (part adults and others atthents in several high schools) as to use of 107 (term) of chemistry. Five point rating scale was used and average of "frequency" found for each item also of 'pleasure' Index of willity is product of the two Findings Reliability of the reports was 31 Correlation between the index values for eight groups of adults and the high school pupils was from 64 to 88 Apparently these index values may be obtained from high school pupils without the questioning of adults

1500 Hurd A. W. Achievements of students in physics. Science education 14 437-47 January 1930

1501 ——— The effects of previous upon subsequent courses in physics Lducational administration and supervision 16 141-46, February 1930

Data are hard on the ratings of two groups of stodents in unit text in high action plating rice preliminary to and at the explantion of the period of instruction on the unit. The groups consisted of students who had not who had not previously studied nearst science. Data indicates that if groups have as lide over-tain topics, they oridence more knowledge of the field and are able to maintain the supremacy through a subsequent cortex in tha state or d.

1502. — High school ; bysics makes small contribution to college physics. School and society 31 468-70 April 5 1000

from data gathered at the Luterrity of Minnesota in the achool year 1904-1929 from the department of physics, it seems that there is a stendency for students having high achool physics to do better work in college physics although it is not definitely marked. It would seem that the best preparation for college physics as taught in the courses.

investigated would be a mathematical aindy of formulas. The language used in the college course is not used in the high school course to any great extent.

1503 Hurd A. W Reorganization in physics. North central association quarterly 4 277-93 September 1929

1504. — What are girls and boys getting from their school courses in science? Teachers college record 31 642-47 April 1930

Presents factual data in the field of physical science in the secondary school, showing present achievements of high school pupils

1500 Kiebler E W and Curtis Francis Day A study of the content of lai oratory course in high school phy ics Schol science and mathematics, 29 950-8. December 1829

980-50. December 1929
The purpose of this study was to learn the relative freque cy with whi it various labora tory exercises in high school physica appear in widely used laboratory mannals and the relative importance of these experiments as Indicated by indiments of competent experts.

1506, Meyer Stanton Herbert. An evaluation of certain standard tests in high school physics Master's thesis 1929 University of California Berkeley 24 p ms

A study to determine comparable statistical constants on fire of the most standard tests in the high school physics. Findings. The five tests showed relatively wide differ ences in rel ability. The coefficients of reliability ranged from 75 to 80 compared from the test scores of a common population of 80 high school students. Intercorristions of the physics test scores were presented. The average intercorrelated value indicate that in the case of only one test of this series does the function measured over lao the functions measured by the other tests have as much as 80 over cent

1507 Mongerson Oscar V An analytical study of references to physics in womens magazines Masters there 1979 University of Chicago Chicago III 74 pm

1508 Morrow Paul Reed. The problem of integration to the physical sciences for the later years of the high school Doctor's thesis 1930 University of Cincinnati Chickonati Chickonati Onio 188 n ms

The aims for high-school physical science were largerilleted through letters question naives and a study of current literature. The major goals of a struct on are development of scientific attitude winderstanding of and some degree of skill in the applications of science to everydry life, and appectation of and interest in the physical environment. A tentistic outline is given which may be utilized for detailed construction of

a course of study in unified physical science for the later years of high school.

Four types were found workhools syllable refrew books map manuals approximately one-half of them contained the above mentioned side.
- 1632 Parker Cleo 4 study of the vocabulary of modern European history textitos &s used in Hamilton county Master's theels 1930 University of Chrismati Chichmati Ohio 47 p ms
- The purpose of this study was to learn the degree of vocabulary difficulty of the modern European history textbooks used in finantion country Conclusion. The menting in modern European history textbooks is obscured to a large extent by a vocabulary that is too difficult for the average pupil. That his difficulty is not heritable in stown by the fact that less than built the little known words are really necessary for itsory comprehension. The rocabulary should be simplified by the elimination of the uncommon words having no historical significance. The pupil can then devote his coercifes to the mattery of words of real largestance in the devote his

A sindy of the educative infinence of church music its value in worship the importance of the correct use of music in services so as in give expression to religious experience and its raise in better living in the community by adults and children Findings. In religious education most estructs, if fires the attention, it sids in the remembrance of truths rereaded. Music brings truths or religious resilities into life in such ways as to luster its possibilities of being freely recupressed and creating atmosphere and mood fravenile to the development of true Christian abstracter and living.

1676 Gray, C T and Bingham, C W. A comparison of certain phases of musical ability of colored and white public school pupils Journal of educational psychology, 20: 501-506. October 1929

A total number of 258 colored and 219 white pupils from colored and white public schools in cities in Texas were examined. The superiority of the whites when compared with either mulattees or negroes seems apparent in most comparisons made. When training has been applied, the mulatto is superior to the negro. A relatively high correlation is found between total numbels accord and index of brightness.

1689 Monroe, Samuel Frederic. The development of Instrumental music in the public schools of the United States. Master's thesis 1930 New York university. New York, N Y 115 p ms

A study of public school music from the time of Lowell Misson and of the causes of the rapid development of instrumental music in United States public schools since 1915 Findings. The field for the sale of musical instruments to public schools is burely touched Plenty of teachers of instrumental music are available. Definite standards for teachers have not yet been formulated though a college degree seems increasingly necessary. There are numerous schools offering degrees for supervisors of instrumental music, the number is increasing this slong.

1690 Moon, Doris E. Diagnostic tests in harmon; Los Angeles, Calif, R. L. Jones, 1929

Test comes in booklet form containing two parts 25 pages in each part Part 1 covera elementary incory up to harmonistation of 3 tone melodies Part 2 covers harmonization of 3 tone melodies involving use of tonts and dominant chords and their inversions

1895 Phillips, Mabel Gossman A case study of the monotone problem in the junior high school Master's thesis, 1929 Indiana state teachers college, Terre Haute 95 v ms

An experiment was carried on with 35 pupils classed as monotones. A case girdy was made of each pupil with reference to grade age, 10 gating, schoolatic standing, school musical opportunity, environment and personal traits scores made on testa, causes for monotonium in each case, and rome that measures which were most helpful to the find vidual. It was concluded that monotonium in the innior high school is more prevalent among boys than among gird, each monotone is un individual case and should be treated accordingly contributory causes found most frequently were timidity and self consciousness sinck of proper musical opportunity and individual training in the primary grades, lack or musical environment and encouragement in the home, limited total range, defective hearing lack of funate musical talent and of laterest in music Monotoniam in jundor bigh school pupils can be cured by segregation and careful systematic dittil on belorid vocal exercises accompanied by pattence or pupil and teacher

1725 Israeli, Nathan Variability and central tendency in aesthetic judg ments Journal of aprilled perchol gy 14 137-49 April 1930

The article reports data on variability und central tendency in sevihetic judgments of colored triangles and painting reproductions in colars. One hundred and sixty two autjects were tested 47 of the a bjects were graduate sindents tile others were freshmen high school students. Data indicate that q alitative similarity of reactions is the rule for all subjects and that quantitative differentiation is found in the central tendency and variability of different age graups. With increasing age there is less variability and More errorment

1726 Johnston, Isabel A study of the art desprend in various teachers colleges Master's thesis, 1970 University of North Dakota University

1727 Leeman Pauline Wynn A study evaluating children's drawings in I indergarten and curly grades Master's thesis, 1970 George Penbody college for teachers Nashville 1 ann 56 p ms

Fifteen hundred drawings were studied standards by authorities in art education and sarly elementary education were compared curs at literature was read. The result of this study indicates that there seems to be a gap existing between grown ups who set art standards of attainment out those who learn from children in their art expression The latter group seem to be in the ascendancy putting emplasis upon ability to express graphically rather than building skills apart from the desire to express freely Hawaver these techniques do seem to be felt necessary by the child when he feels a inck of skill or insdequacy to put his iteas into better form

1728 Lawerenz Alfrad S Predicting ability in art Journal of educational psychology 20 702-704 December 1923

In September 1928 42 students were given the Los Apprica tests in fundamental abil ities of visual art and the results recorded. Data indicate that there is a high degree of relationship between predicted ability and later performance

1800 Gilkey Royal The relation of success in certain subjects in high school to success in the same subjects in college School review 37 576-88 October 1829

The investigation is based on a study of the high wid ool and college records of an often who were graduated in 1921 1922 and 1923 from the New York State college for teachers. The only studer is considered were those wie band done light it light school marks were obtained in Recents examinations. The studies were classified in six groups and college courses were aimlying required. The lightest correlation is for East light school marks were obtained in sacred thanguages the market six that for accent languages the market six and for the sacred thanguages the market six and college course were all majors were college-proparators coursely and college courses.

1891 Gouid Silas E and Davis Robert A Some reas as why high school pupils choose certain subjects School review 37 602-14 October 1920

The reasons for the selection of certain ambjects by 1800 high school pupils in the sophonome junior and sector years in three large high school systems in C locado was studied. The most important reasons given for choosing certain subjects are as an aid in suching a ll in, because of stylec from parents friende or schoolmates belief that they can make a good grade in the subject because of advice for someone connected nith the school system because of its reputation or slanding of the subject. Data indicate the pupils exercise judgment in giving reasons for their cholers.

1912 Knight, James and Manuel H T Age of school entrance and subsequent school record School and society 12 24-26 July 5 1930

A comparison is made in this article of the school ancers and progress of a group of 62 high-chool graduates who metered school at six years of age and a corresponding group of 41 who entered at seven. Data were secured from the records of all the June and August 1092 graduates of Wares high school. Data indicate that those windeats who entered the first grade at six did as well as, or a little better than those who cotered later.

1913. Koch, Harlan C. Is the department head-hip in secondary schools a professional myth? School review 38, 336-49 May 1930

The functions of the headship as propored by heads of departments themselves may be divided into two major categories, administrative and supervisors, although there is some overlapping in these divisions. Bit department brains in 171 hips schools in 174 cities reported the extent of their functions in seven fields. They participate most freely in changing the curriculum and in selecting textbooks. Findings. There is apparently in changing the curriculum and in selecting textbooks. Findings. There is apparently little agreement among school administrations as to what the functions of department heads should be. No generally accepted criteria of selection of individuals for the position are operature. The preceptives of heads of departments are accretely instituted.

1014 ——— Some aspects of the department headship in secondary schools school review, 38 263-75 April 1030

Data secured from superintendents principals and department bends representing 171 high acholds in 114 cities in 31 states indicate that there is a wide range in the qualifies those repolied for the position 268 per cent of all tenders appointed to department intendingly and indepart from air to ten prace. There is a wide gap between the headship had adequate preparation for it, especially in the major fields. Many heads of depart means indicated that there had atten education as a graduate major or minor anhiest aboving that they are professionally alive to the professional requirements of the position of the heat of a department.

1991 Lyman R. L The junior schools of San Antonio Texas School review 38 414-29 June 1930

The junior high schools of San Autonio were studied as to integration normalization individualization exploration and socialization. They were inaugurated in 1923 when the entire school system was reorganized on the 5-3-3 basis. No one of the functions of

the schools is definitely segregated from the others, no one of them is exclusively out by any single school procedure. The easence of the junior high school lites r siministrative devices but rather in a radically new conception of the curriculum series of carefully directed pupil experiences in fields of subject matter closely reint the needs of boys and guits in which daily lives.

2032 Morton, Hugh Dudley Public jumor colleges trend in offerings and qualifications of faculties Master's thesis, 1930 George Peabody college for teachers, Nashville, Tenn 137 p ms

A study of junior colleges established prior to 1920 and operating in 1929-1930 school year (in Dutted States). Findings Many public junior colleges do not preserve coun lete files of their publications, there is great lack of uniformity in the terminology in describing course of the same content. The thread in officing in public junior colleges in the United States is to increase the number of courses and the number of semester hours in each course. Yeard in afternas is away from vocational subject.

### NORMAL SCHOOLS

2115 Orata, Pedro T The Philippine normal school graduates Manila, P I. Bureau of education 1930 30 p

An extended and critical analysis of the work being done by Philippine normal school graduates of 1923 to 1923 in the Eutrem of education. Findings. Majority of the graduates follow the line of work for which they were prepared and have satisfactory efficiency ratings. There is a need for their systematic placement

2116 Shaw, Robert W Some aspects of self-insight as found in students of a two year normal school Doctor's thesis [1930] Teachers college, Columbia university New York, N Y

The group studied for this thesis comprised about 270 students largely women enter ing Maryland state normal school. Students were required to fill out a personal ques tionnaire which yielded score on awareness of adjustment mechanisms, score on social self confidence as indicated by freedom from self-consciousness. Students were asked to estimate their achievement on a cange of Beademic subjects on entrance at the end of the first six weeks and at the end of the term Major informational materials to which these self losight scores have been applied are intelligence first term grades teaching grades to a criterion group of 25 students of marked ability, 50 average, and 25 of marked self confidence selected through dormitory, advisory, practice teaching and classroom reports Findings Choice of scale is important as determining over and under estimate, nature of task has a strong influence on whether the trend of the estimate is over or under Of the different tests the number underestinating ranged from 25 to 100 and over estimating from 83 to 227. To the degree that one continues from day to day with cretain rather constant levels of achievement, one may be expected to display quite similar blases of self-evaluation when these particular levels are involved. There is an accuracy of judgment on items designs with sense of social adequacy which is comparable to accuracy of estimats on academic materials

2118. Sims, Verner Martin A comparison of normal school students with certain other groups
School and society, 30 68-70, July 12 1020
A symmol of W women enrolled to the two-rear normal courts at the Louisians point.

technic lustitute in the fall of 1027 were compared with 01 women carolled in the different four-year college courses pinned for prospective high ethol letcher Conclusions. The normal students are inferior to the college students studied in intelligence in weachuter, in acclo economic states and in Fagish ability. They have parents with less education graduats from smaller high schools and make lower grades in both high school and college than cellege students within the same institution.

2119 Smith, Ernest Thomas The graduates of a department of secondary education in a state normal school Masters thesis, 1930 University of Chicago, Chicago, Ill.

The operation of a three-year course for the training of high school teachers is do arribed and evaluated largely in terms of the life-automes of the graduates. Findings: The inter-year course is a bridge by which collect practices come into the normal school, there is evil case of a tensolog drift away from teaching and increasing professionalization of checality.

- 2102 Frasier, Clark M Intelligence as a factor in determining student teaching success Educational administration and supervision, 15: 623-29. Nonember 1929
- A comparative study was made of the highest and lowest five per cent groups in intelligence. The first group consisted of 603 students who took the Army alpha intelligence test as part of their estrance examinations at the Lewiston normal school. Lewis ton Idaha, between June 1925 and February 1926. The second group consisted of 406 students who took the Terman mental tests between June 1922 and June 1924. The highest and lowest five per cent for each group were compared. Three ether groups of students were studied for a comparison of evidence based on coefficients of cortesiston. Data indicate that intelligence as measured by standard intelligence tests into an importance factor in determining success in student-testching, that given enough intelligence tors distilled from high school, further indeligence has sittle effect on student teaching success, that success lo student teaching is dependent on other factors than intelligence.
- 2103 Glasser, John Henry Supervising student teachers in teacher-train-
- ing institutions. Master's thesis, 1930. University of Chienco, Chienco, Ili. An investigation of the supervision of attouch teachers in normal schools and teachers colleges in the United States. Findings The aims of trading schools are chiefly to provide opportunities for colorration of superior teaching practice in tesson planning, an introduction to actual school conditions, experience in teaching, and skill in classroom management; training teachers have not been include sufficiently in academic work to meet the scholastic simulation for accrediting institutions they serve Student teachers expursing deficient in academic preparation upon enlarned to teaching, only 17 per cut of the teacher training institutions require students to teach from the beginning of their practice predent. Student teachers are the sufficient opportunity to administer diagnosis and standardized teach in their predefections they are in little supervision modifies and standardized teath in their predefections the interest in the supervision of tradest teachers, the immaturity of the student teachers, and student leacher disciplinary profilems.

2200 Stevenson Fred G Study of forms used in making contracts with public school teachers | Elementary school journal 30 525-32 March 1930

Methods used by 462 public school systems in making contracts with teachers were studied. Fort two cities employing merity one third of the total number of teachers employed by all the school systems are no written or printed form of contract in employing teachers. Some school systems use an informal letter offering a position and requiring an informal letter of neceptance to complete the contract others require a legalistic two party agreement form of contract. There is little standardization of contract forms except as required by statute in a very few state.

22:06 Sturtevant Sarah M Strang Buth and Hooton, Mary Turnover ninong deans of women Personnel journal 8 384-02 April 1930

A study was made of the turnover rate of deans of women in 374 liberal arts colleges and universities and in 128 normal schools and teachers colleges. Data secured are metul in estimating the probable number of positions nvaliable to qualified deans and in suggesting some of the factors related to turnover in this vocation.

 (Contributions to education no 413)

Answers to the following questions were sought (1) What is the effect of the single salary schedule upon the training of teschesa? (2) What measures other than training and experience are used and how are they used? (3) How does the source expended for teschers? salaries in single salary cities compare with that in require cities? and (4) What are the administrative problems involved? When the two groups of cities were compared in respect to the training of the teachers, it was found that the elementary teachers of the single salary cities were better trained than were those of the regular salary cities.

  - 2434. Washington D C Public schools Report of investigation of methods of payment of public school salaries in large cities 1929 14 p ms

Results from a queetdomaire seat to 40 cities with populations over 100 000 show that there is little uniformity in the method of salary payment in the large cities eslected for salary. There is a great diversity in the methods of payment of various types of employers within a city system. The prevalent practice is to make monthly payment to officials teachers and clerks and semimorbitly payment to unifoldials teachers and clerks and semimorbitly payments to unifoldials. The most frequent practice is to make payments on a 12 month basis to officers controlland clerks but on a school month basis to centers.

This study was based on the graders of the undergraduate student body at the University of Wisconsin and extended over a period of eight senesters. The scholatic average of women students is significantly higher than that of the men students. Women who are members of sourciles rank above women who use no students with socratic Fratestrip men rank higher than non frateristy members. Men and women who live in the dormit ories which are under the jurisdiction of university officials receive lower grades than men and women who are living in houses maintained by the student groups. Grades in each group tend to be higher in the second senseiter of each year than they were in the first senseiter. Scholastic relationships between the various groups were constant through out the eight senseiters considered.

2495 Lauer Alvah R. and Evans J E The relative predictive value of different high school subjects on college grades School and society 31 159-60

Pebruary 1 1930

A random sampling of 40" students was mode from the freshman class of 100% at foots after college. Only the grades for the first quarter were mad in the study to show the relation of high school grades to college success and to intelligence scores of students who are pursuing work of the technical type Data indicate that the high school average is slightly superior to intelligence test records for prediction of first quarter grades. Migh school grades should be used in connection with intelligence ratings to propositions college success.

o496. McGrath Earl J 1 study conterning the relations between the amount of out the work and grades of the sindents at the University of Buffalo with a unscussion of the motivational factors involved Master's thesis 1930 University of Buffalo Ruffalo N Y 65 p ms

A study of the classes in the various colleges of the University of Budhol abowing that students who work do not as a cise seceive lewer grades and that work is less detrimental in the last two pears than in the first two. The question is how much work is to be done and not merely whether to work or not.

From this study it was found that under ordinary conditions and methods the average sixth grade class may be expected to mark correctly 980 to 985 per cent of the spelling words found in gdally lesson of 20 words

3138 Hotchkiss, Medora A. Analysis of factors affecting marls in high school algebra. Masters thesis 1930 University of Colorado Boulder University of Colorado studies 18 75 December 1930 (Abstract)

Determines the types of pupil performance marked by algebra teachers and the weight assigned to each of them the relative validity of the various types of classroom marks as measures of achievement. Data for the first part of the study were secured from a questionnaire an annexed by 130 algebra teachers from 224 accredited high schools of Colorado. Data for the second part were obtained from a careful study of marks given by three algebra teachers in a city in Colorado. Data indicate that the validity of the various types of performinces as measures of achievement valied with the teachers who measure of achievement, marks for daily written homework are perhaps the least valid measure of achievement.

The suther deals with the most common types of office records and reports dealing with hadridatal pupils school membership teachers and emphyment and supplies. The deferrent kinds of records kept by 522 representative secondary schools were studied.

The data showed a marked tendency on the part of administrators to collect and preserver a variety of information which may be used in making reports to superlatendents and others. The handling of the data requires foresight constructive planning and development of edicate office practices. Percenting and reporting require less labor in the small schools than in the large schools. Gold forms must be devised and routine procedures must be established for the mixing and filing of records.

#### RETARDATION AND CLIMINATION

3179 Baker, David Russell Age-grade-progress study of the public schools of Hamilton Ohlo Masters thesis 1930 University of Cincinnati, Cincinnati Ohlo 75 p ms

Teachers in all grades from one to 12 secured and tabulated data on a new form which gives a complete picture of grade age and progress in an effort to secure data which will be valuable in organizing special clarect and in reorganizing the system on the C-3-D basis Findings. Amount of overage-ness and retardation is not exceeding when compared to similar school systems. A large amount of overage ness and retardation may be traced to pupils who have nettended schools in other districts. A larger per cent of girls make normal progress than boys. Greatest amount of overageness and retardation are found in the fifth and sixth grades. Low mentality lack of application and repeated change of schools neel larget. Low mentality lack of application and repeated of the pupils. Amount of overageness and retardation which varies and retardation of the pupils. Amount of overageness and retardation which varies considerably in the different buildings and grades in modonbtedly due to the different types of districts from which pupils are drawn.

3305 Smith, James H Legal limitations on bonds and taxation for public
school buildings Doctor's thesis [1930] Teachers college, Columbia univer
sity, New York, N Y

Limitations on school indebteduess were obtained from stats constitutions, school have of the states. Effects of limitations on school indebtedness on achool building programs of various close were found in recent surveys of the school systems of those cities Findings Forty sever states have limitations ranging from 2 per cent to 20 per cent of assessed variation of all tanable property. Most states require a popular vote to authorize a bond issue. School bonds are preferable to sinking fund or straight term bonds. Most states limit maximum number of years for which bonds will be listed, mesimum interest rate varies from five per cent to eight per cent, 35 states require that no school bonds be sold below psr. Provisions for victorial bonds should be clearly to carrying needs of different types of clistes or record bonds abould be clearly to carrying needs of different types of clistes.

#### MENTAL HYGIENE

3433 Alteneder, Louise E A survey of work in the field of mental hyriene in the teacher training institutions in the United States for the academic year 1920 1930 Master's thesis 1930 New York university, New York N Y 113 p ms.

The study is based on data received from 230 of the 295 teacher training institutions in the United States in response to a questionneire. The survey has shown that the teacher training institutions are coming to recognize the Importance of mental hygiene for all instruction and are introducing courses and clinical work where possible Papid progress in this work has been made during the pant 10 years and the amount of literature has greatly increased. The emphasis in mental hygiene has shifted from the abnormal to the normal from the problem of treatment to that of prevention. The individual is becoming the focus of attention and education is striving to meet the need of the child

3134 Burnham, William H Personality differences and mental health Journal of genetic psychology 36 331-89 September 1929

Several etulies of personelity differences are reviewed by the author. The conclusion is reached that personality is not made by education but may be improved by it.

3524. Strum, Arthur L Administration of athletics in teachers colleges.
Teachers college journal (Terre Haute Ind.) 1 161-64 July 1930

This study of athletics in teachers colleges showed that a number of institutions bere state support for athletics. The responsibility for spending funds is placed often with the athletic director but in almost an equal number of cases the faculty athletic committee has this responsibility. In the mylority of cases, the surplus funds secured by student fees must be spent for the direct conduct and administration of athletics.

3025 Van Antwerp James A comparison of the college records of athletes and non-athletes 1830 Monmouth college Monmonth III, 10 p ms

3616 Wessel, Herman M Secondary school population in some of its social and economic relationships Doctor's thesis, 1930 University of Pennsylvania, Philadelphia 154 in ms

A study of the high school population of Cheltenhum township. Findings Differences of a sociological and psychological nature exist among the students of the secondary school. These differences trad to be narrowed as the grades advance, so that the inst war of the high school has a more honogeneous group than the fast. Three selective factors which seem to be operating are the intelligence of the children the occupations of the fathers and the chind origins. A forther observation of sectivity is reduced by groups can be found in each. This selectivity operates also in the statements of the public plans for combined education.

#### CHILD WELFARE

3617 Davis, Robert A Need for guidance in orphan homes Ciementary school journal, 30 51-55 September 1923

One thousand fifty-one children in grades two through eight, in six orphanars in central Texas were given Dearbour group intelligence text and Huxzerty intelligence examinations. Children ranged in ages from six to 21. Only five per cent of the children are above normal according to Dearbour text, then per cent as determined by the Hagnerity text. Types of activities engaged in by children as part of their duly life were studied Text indicate that there is no definite and purposedul attempt to train the children scientificially in types of occupations they will enter when they leave the institutions. As most of the children are in elementary acheod vescitional courses and vectorian gludges should be given in elementary rades as well as in high school. Children could be trained in types the contract of the children and the production of the children are by the contract of the children including notial and case records physical and medical historics of the children and the results of mental, track and other texts.

Data were secured from 1 341 high school students from 27 schools located in nine counties of three states. All of these schools were in Tennessee except two one of which was in Virginia sod the other in Kentucky. In the light of the evidence brought out by this investigation it seems that the rural communities dealt with tend to perpetuate themselves from their lower intelligence levels and thereby give a downward trend to the average native shility of the succeeding generatiod. This tendency was not large but was found in the evidence gathered. There are still many of superior intelligence born on the farms and a fair proportion of these seem inclined to remain there

The groups selected for it a study were mostly public school groups but a few were lockly led from schools for delinquent boys and gets. The grades studied included the seventh to the twelfth. Electe thousand eight bundred thirty one tests were admin latered. Conclusions (1) Methods of Biblical instruction should be radically improved if we are to get desired results in character development (2) if the Biblis is to be a part of the school curriculum as it now is in many states it should be given a place at least equivalent to that of the other subjects (3) better trained Sunday school or church achool teachers are highly desirable and (4) better curricular arrangement of B bilesi materials is highly desirable.

An empirical study of children's interests in spiritual reading Doctor's thesis 1830 Catholic university of America Washington D C Washington D C Catholic university of America 1830 107 p (Catholic university of America Educational research bulletin vol 5 no 4 April 1830)

The study sims to suggest interesting spiritual reading material for children in the Catholic elementary school determine the qualifies that make books interesting to children and show how ideals of conduct may be furtheded to these children through the medium of spiritual reading. One bundred forty books were graded and distributed

among various grades in 14 schools where 878 children took part in the experiment Spiritual reading books which do not passess the qualities that make for interest in other books are not popular with children. The style in which the book is written as well as its outward form is very important

Findings There is a great deal of confusion relative to the terminology employed in designating manual instruction in the achools no list of objectives for the industrial arts will meet with universal acceptance. There are relatively few state and city course of study in the field of industrial arts. School surveys have discovered little in the field of industrial arts to recommend. Textbooks in the field of education advocate extensive rather than intensive industrial ners work. Educational leaders criticise house trial acts on the grounds that they lack proper objectives proper methods of teaching procedures etc. Most industrial arts work is staken by pugils in the seventh and eighth grades and consists of woodwork and mechanical drawing. Those who have had industrial arts work can do much of the repair work about the house and its equipment and many of them would select a larger amount of industrial arts work if they were repeating, their school courses

4001 Kay, Edith W. The nature and distribution of college personnel activities Master's thesis, 1929 University of North Dakota, Grand Forks School of education record of the University of North Dakota, 15, 187-91, March 1930 (Abstract)

Compares personnel work in industry with that in rolleges, and formulates an efficient comparisation for the handling of the personnel problem in the amusii college of chemistry. The thesis lackade as collection of record forms used in the University of North Dakota, and charts illustrating the present and proposed plans, office arrangement industrial plan and other materials which support the problem.

4002 Hern, Mary Margaret Vocational intentions of "Mortar board" seniors Personnel journal, 8 266-70, December 1929

A survey was made of 251 Mortar based seniors in 33 colleges to learn their attitude towards their choice of a career the financial aspects of their choice and their appendix of their own qualifications for occupations. For this group of crits qualifications which would be of commercial value are few. Data indicate the need for more concrete vocational guidance

4003 Kitsun, Harry Dexter Does general mechanical aptitude exist? Industrial arts and vocational education, 19 215-19, June 1930

distrint arts and vocational education, in 213-19, June 1800.

A critical survey of the leading tests need for the measuring of mechanical aptitude
It was found that few of them satisfied the demands of scientific method as to reliability
and validity. These results cast serious doubt on the validity of the concept "mechanical
spitude."

4004 — Investigation of vocational interests among workers Psychological clinic, 19 48-52, April 1930

Report of the use of a scale for investigation of the degree to which a worker likes his votation. Figures reported referred to 24% teachers 140 graduate nurses and 28 policemen. Each regarding gas at which these persons decided on their vocation were also disclosed, leading to definite conclusions regarding the significance of age in making ones choice of vocation.

4005 Kopf, Helen M Present vocation of nlumni who were honor students

This is a check on the choice of vocation of 73 honor students. Findings 20 per cent became teachers 30 per cent entered business, 33% per cent continued schooling and 4 per cent entered professions

4010 Long Beach, Calif. Public schools. Department of research. Occupations for high school graduates based upon a study of the class graduating at Polytechnic high school in 1924. [1930] 8 p. ms

If the curriculum of Long Beach is to be guided by vocational considerations, the semiprofessional, hastness, domestic and personal service, transportation occupations, and certain of the more athich manufacturing and mechanical occupations should receive serious consideration. It seems probable that the curriculum offers sufficient in the way of preparation for the higher professional occupations.

  - From 1893 to 1924 high school commercial education has grown more rapidly than high school enrollment. Real wage sindles of clerical workers indicate that the econamic importance of this group is relatively decilolug and that the subdivision of tasks of clerical workers is carried on to such an extent that much clerical traluing may well take place on the job rather than at public expense. Clerical education should not be confused with general business education.

A study of elimination causes and related factors from the culters of engineering of the University of Arkanus for the years 1922 through 1920 Initiates. Approximately half of those who stabulate from the engineering corriculum rull to a cure that diplomas in it is e-abcidual time for four years. There is a high degree of pertisence in attendance until graduation on the part of those who remain in account of our years. The engineering curvilum has relatively low bolding power even for the freel most who make grades of C or shore in their first attempts at college mathen after Concomic considerations and other homescholastic influences play a part in elimination of students. Twenty per cent of stal ints are transferred to other colleges on initial times. In spite of the more rupit elimination of those who get lobeling in the centler semesters the remaining group carry a constantly increasing lost of fulled or unfloid de subjects in the end of each unceredule generate.

- A study was made of 120 ninth grade papils in the junior hi,h school at South Haven Mich during February and Mesch 1929. The characrea and extent of the cust dedicincies of the pupils were measured by direct observation. Notify half of the custe dedicincies observed pertain to whispering or taking sloon without permission of the teacher in charge. All the civic dedicincies observed were possessed to some extent by the better groups as well as the poorer groups. Results of the test showed that the pupils possessed the greatest smount of knowledge about topics which deal with local status or that come within the range of their swaryday apperiences. Data indicate that the possession of a greater amount of civic knowledge sided the pupils in their practices of citizenship in achool.

4337 Goodsell, Willystine A study of the size of family among a group of college and noncollege women. Study undertaken independently, but reported on at the annual meeting of the American sociological society Washington

D C December 1929 The investigation included 489 college women and 469 noncollege women of the same social class and similar age range. The findings show a tendency to family limitation in both groups. The college group had an average of 15" children per marriage, the noncollege group had 1 70 children per marriage or 33 more in absolute numbers. In the college group one child was born in every 5 20 years in the na college group one child in every 611 years. The average age af marriage of the college group was 247

years of the noncollege group 23 46 years. So far as this study goes it shows that callege education is a relatively unimportant factor in family limitations 4338 Herriott, Jesse S | hysical development of college women 1904-1928

Research quarterly of the American physical education association 1 46-53 March 1930 Summarizes the results of a study of the physical development of college wamen for the purpose of determining the increase ar decrease of the average age weight height

4371. Vincenty, Nestor I. Racial differences in Intelligence as measured by pictorial group tests with special reference to Purtn Rico and the United States. Doctor's thesis, 1929 Harvard university, Cambridge, Mass 202 p ms

This study was started with three major ends in view. First, to ascertain the adequacy of pictorial non isnguage group intelligence tests for the measurement of mental differences between Porto Blean and American children in their early years of childhood; second, to make a romparative analysis of the achool educability of Porto Rico first grade children, simed at determining the extent to which the main features of the American school system are applicable to the mentality of the school population; third, as a significant corollary to the first end, to investigate the validity of the pictorial non language testing technique for the measurement of racial differences in intelligence Conclusions: It was found that the educable capacity of Porto Rican children can not be properly determined by means of the tests used in this study, which are specifically adapted to the United States, and not equally applicable to Porto Rico Pictorial non language tests of Intel ligence, therefore, seem inadequate for the measurement of racial differences in mentality, and will remain so as long as the pictorial factor disturbs their validity

One section of the city of Warkington was subjected to ecological analysis to determine it possible what factors were correlated with delingency. Findings The delinquents appear to be distributed according to economic divisions of the vection. Those parts mentioned as being most stable are practically free from delinquency. As the degree of economic stability increases delinquency decreases. The highest peek is received when one strives at the neggo section. The negro is normally forced into the worst section. This social regrection gives rise to a deternation that abounds with him and follows where he goes.

4490 Boach, William L. Record of juvenile delinquency in Benton county, Oregon (1907-1929). Journal of juvenile research, 14, 34-40, January 1930.

I study was made of the various types of delinquency, the age and sex of the delioquents, the parental relationship, and the disposition of the 149 Juvenie delinquents in Benton county reported from 1007-1029. There were 102 boys and 47 girls reported. Broken Domes appear among the delinquents about six times as often as in the general rural population of Ortezon.

1700 Darnard, Raymond H Relation of intelligence and personality to

speech defects. Plumentary school journal 30 601-20 April 1939.
The inclinence of speech defects in the school population is great security to constitute a serious problem. The author compares the studies made on speech defects by various values who have studied the problem in various cities up 1 states. Parts in dicate that

varying levels of intelligence are found in v rios kinds of speech ded vts. Low intelligence is a symptom rather than a cause of speech defects. Retardation in school in ' the case of speech defectives is not caused by lace of intelligence but is an emotional unlaidstatement which may be remedled by no understainling of the personality of the individual & bibliography on speech defects concludes it a stricle

4510 Berry Charles Scott and Stoddard Clara B An experiment with ilspers Journal of applied psychology 13 543-53 December 1929

An experiment was undertaken with 314 lispers in the regular grades of it - Detroit public schools to determine to what extent lispers who receive no corrective speech training improve as compared with those who receive such training. In both the experimental and control groups positive correlation was found between cristed of defect and amount of improvement. In this experiment speech improvement in lispers of like extent of defect and to be consistent only in sight degree by differences in intelligence age home language or ax as compared with corr cities training in speech improvement classes

4533 Clark, Willis W. Elementary vacation school survey-1929 Los An geles educational research bulletin, 9 G-7, October 1029\_

A series of tests in reading and arithmetic was given all vacation school pupils to determine the educational status and needs and progress of the pupils. From the data it appears that very satisfactory progress was made by pupils in reading and arithmetic and that the giving of standardized diagnostic tests has motivated the analysis of pupil difficulties and the provision of remedial work by the teacher and has resulted in consider shy more progress than occurs without this all Need for variation in teaching procedures to meet marked differences in pupil accomplishment is as pronounced in vacation school as doring the regular school year

- Tenn 57 n ms. Historical development of library service to the rural schools in the United States based on practice revealed in the writings (excluding State i brary commission publica tions) since 1900 Seven distinct methods of service some efficient and some inefficient have been used. County libraries seem in give the best service

4610 Husband Ivy C Judging children's fiction a statistical study Doc-

tor's thesis 1930 University of lowa Iowa City 135 p ms

The specific purpose of this study was to determine the trustworthiness of the Cuidto books for character fiction. The reading procedure called for at least ti ree independent tudements on each book. The first criterion used for validating the grading was that of numerous published lists of books for children. Certain objective me sures of difficulty as to words and sentence structure were n ed as criter a for validation Twenty three eighth grade books and 67 seventh grade books were need for the experi ment with children. The children rend the books and reported their interest in two ways on an absolute scale and later by comparing and ranking the books. Findings Pesults indicate the misplacement of very few books. A tendency to rate the first books read as alightly more interesting than the later ones was noticed especially in the eighth grade. The more intelligent children are better able to reject the very poor books than they are to appreciate the exceptionally good

4622. Magill Walter H The determination of the graphic forms and the frequencies of the forms employed in the current reading matter of the non specialist Doctors thesis 1930 University of Pennsylvania Philadelphia Philadelphia Philadelphia Philadelphia Pa Westbrook publishing company 1930 74 p

Determination at the nature frequency and distribution of the symbolic forms of drawing of map and of graphs employed in current literature as a partial basis for carriculam construction. The forms and elements found with ununrical indices at frequency of occurrence and extent of distribution are given on five large tables. These form the major results of the stady. There is little restriction, on the variety of farms used in magnines intend of for the nanspecialist because of "goorness of the forms. The wideepread use of architectural floor plans in women magnines sanguests the finch sion of floor plan reading in the education of girls. Erichene from magnines for boys gires much greater support to instruction far boys in certain forms of mechanical draw ing than it does for in truetion in map reading instruction for girls in the reading of graphs reveives little support from the findings in women and girls magnines. The frequent and widesy read use of different symbols for the same idea and of the same symbol for difficant ideas emphasizes the need for a more effective standardization of symbols.

4023 Mann, Marguret Introduction to cataloguing and the classification of books Chicago Ill., American library association 1930 424 p

This study discusses the Cutter D C and L C classification systems dictionary catalogue class fed catalogue author title subject and from entries analyce headings L C cards and their use arranguest of cards department routine quarters equipment supplies argumentation and sudministration of the department Emphasites principles siblout, details of actual quarties are not overtexhed. Texts the estateque as a restarch tool for the liberation and for the public Pandings Adequate liberary service requires that the bak collection be shiftedly class fied and estalogued seconding to the needs of the clientles acreed by the liberary The estatequer must cat as a needlum between writer and reader, endeavoring in estimate justify the intention of the one and the need of the other
